

GTEK Laboratory Hydrocyclone Brochure

Description

FX hydrocyclone is one of the most important devices in the minerals industry. It is widely used in the mineral industry processing as a classifier, which has proved extremely efficient at fine separation size. GTEK laboratory hydrocyclone can be used in closed circuit grinding operations for general laboratory application, it also has many other applications, such as desliming, degritting, and thickening.

Advantages

- Simple structure, long service time;
- No moving parts;
- Easy installation and to operation;
- High efficiency.
